## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-33 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularity or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1, 6, 11, 16, 23 with the allowable features being the supports attached to the second surface of the mirror; support posts suspending the mirror over the cavity by the supports, the support posts and supports being formed from a same layer of material (claim 1); supports attached to the second surface of the mirror; support posts suspending the mirror over the cavity by the supports, the support posts having support post plugs (claim 6); supports attached to the second surface of the mirror; support posts suspending the mirror over the cavity by the supports; a bus structure attached to the support posts adjacent to the second surface of the mirror (claim 11); forming post holes adjacent to the mirrors; using a planarization layer to form support post plugs; depositing a flexible layer on the support post plugs and forming attachments between the flexible layer and the mirror (claim 16); forming post holes adjacent to the mirrors; depositing a flexible layer on the second sacrificial layer such that attachments (claim 23). Therefore claims 1-33 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chui et al.(U.S. Pat. No. 7,256,922) is pertinent to the application since it pertains to a DMD with a similar structure.
